

Helping Guide

Importing existing projects

You can use the Import Wizard to  import an existing project into workspace.

1. From the main menu bar, select  **File > Import...** The Import wizard opens.
2. Select **General > Existing Project into Workspace** and click **Next**.
3. Choose either **Select root directory** or **Select archive file** and click the associated **Browse** to locate the directory or file containing the projects.
4. Under **Projects** select the project or projects which you would like to import.
5. Click **Finish** to start the import.

Importing the project.

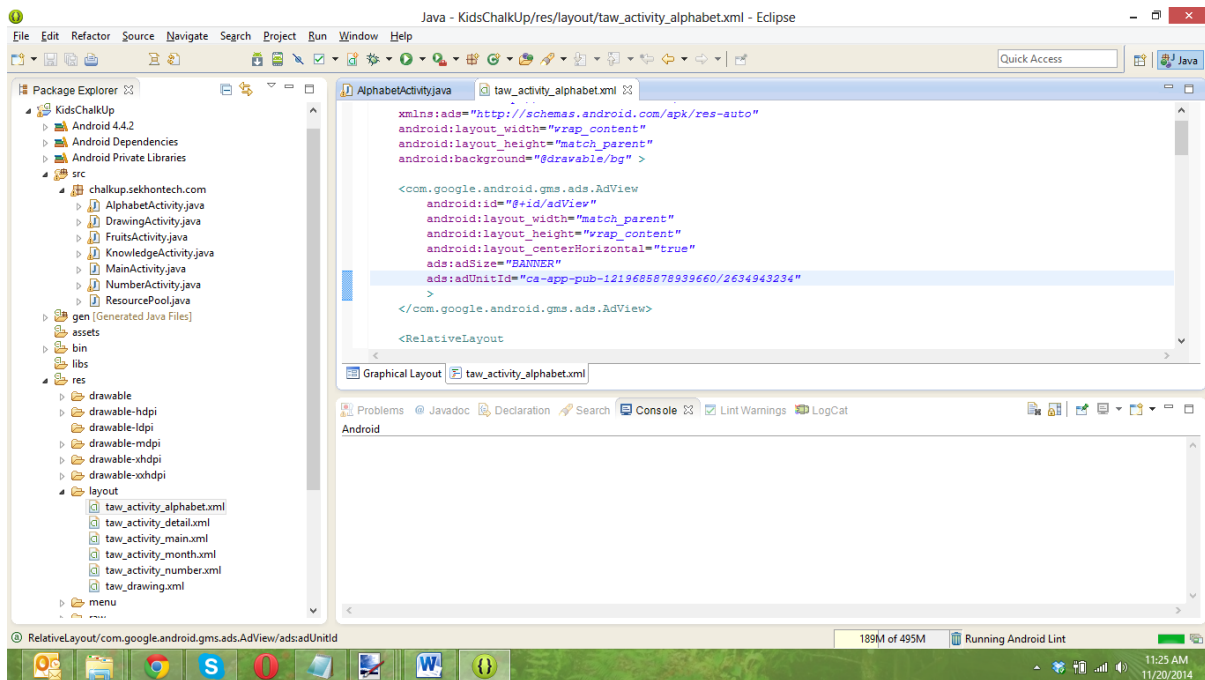

Done.

Now clean the project, that's it.

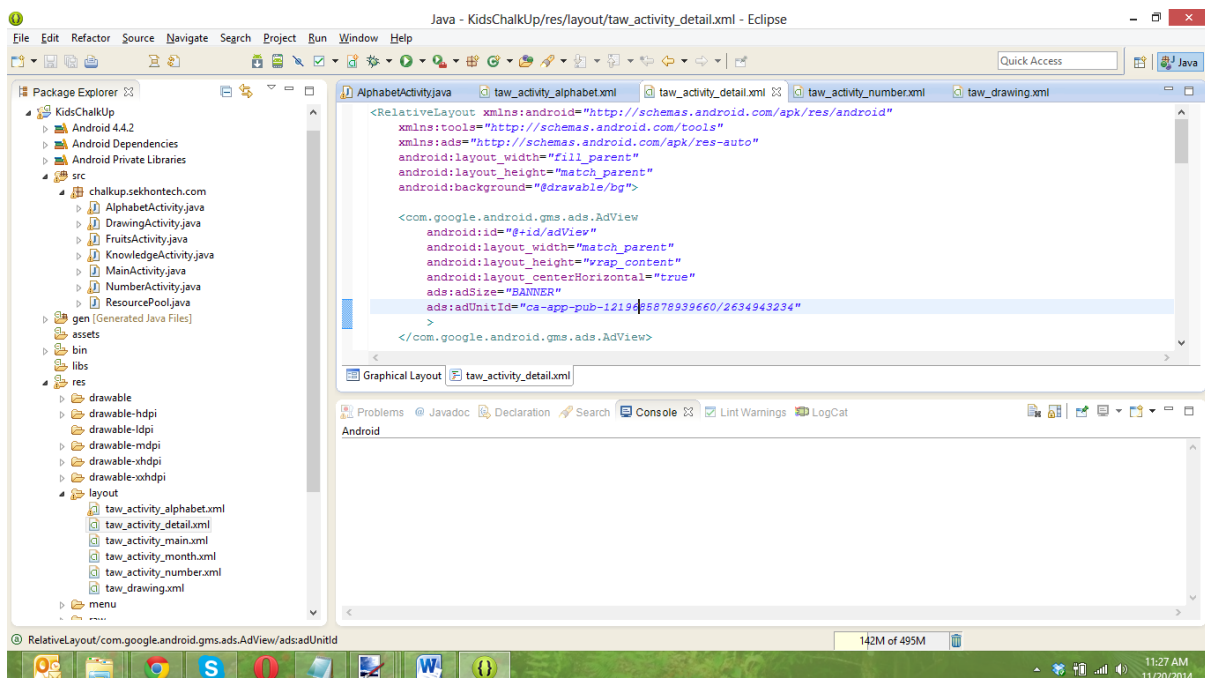

Helping Guide
